## Key Features

- Tungsten carbide grit blade — The grit-coated blade is designed to abrade and remove grout efficiently, making it suitable for repair work and regrouting preparation.
- Angled working head — The blade is mounted on an angled head to help guide the cutting edge into grout lines with better visibility and control.
- Ribbed handle — Deep handle ribs help provide a steadier grip during repeated strokes, supporting comfort and more controlled movement.
- Replaceable blade setup — A separate blade is shown alongside the tool, indicating a replaceable design that helps extend the useful life of the saw.
- Practical storage hole — The handle includes a hanging hole so the tool can be stored neatly on a hook or pegboard between jobs.
