

Kseibi HSS Handheld Countersink with Wooden Handle

Controlled countersinking by hand

Kseibi · 685345

Highlights

- Handheld countersink for controlled chamfering and deburring
- HSS tip supports reliable cutting on finishing tasks
- Wooden handle offers a comfortable, natural grip
- Ideal for cleaning drilled holes by hand
- Helps ease sharp edges for a neater finish
- Compact design is easy to keep in a toolbox
- Good for touch-ups where power tools feel too aggressive
- Shaped handle supports steady, deliberate rotation
- Suitable for workshop, site and bench use
- Simple tool for precise finishing and edge preparation

Key Features

- HSS countersink tip — The metal cutting end is identified as HSS, making it a practical choice for hand-operated chamfering, deburring and finishing work.
- Comfortable wooden handle — A smoothly shaped wooden handle gives the tool a warm, natural feel in the hand and supports comfortable use during careful finishing tasks.
- Manual control — Hand operation gives you better feel and more measured cutting, helping reduce the risk of removing too much material on delicate work.
- Clean edge finishing — Use it to tidy drilled holes, remove burrs and create a small chamfer that improves fit, finish and handling safety.
- Compact workshop essential — Its straightforward, portable design makes it easy to store in a toolbox or keep close at hand on the bench for quick finishing jobs.
